

SPSE Jecna Test Case

Test Case ID: 3	Test Designed by: Samuel Kuta
Test Name: Error Handling	
Brief description: Test how program handles errors	
Pre-conditions:	
Dependencies and Requirements:	

Step	Test Steps	Test Data	Expected Result	Notes
1	Change the config to something wrong			
2	Program will tell you the configuration is wrong on startup			
3	Program will also inform you if you ignore the errors and try to run it anyway			
4	Change reports/ directory read permissions so that the application cannot access it			
5	Program will inform you about this
