

# TS – Basic functionality?

**First read the README.md document and follow instructions, then come back here.**

Once you run the application you will be prompted with the following menu.

```
=====
=====
          E-Prescription
          Management
          Application

          |Ema|

          Samuel
          Kuta
          C4b

=====
=====
|AVAILABLE TASKS|
=====
|report| -> Generate a data report.

|add| -> Add records to database.
|read| -> Read records in database.
|update| -> Update records in database.
|delete| -> Delete records from database.

|clear| -> Clears the console.

|exit|

=====
@tasks/-> █
```

From here, u can procede to type commands.

Type a command, and press enter to submit it to the program.

U can see the list of available commands on screen, or whenever u enter in help.

## **Generate reports**

U can generate reports by typing in the 'report' command. The application will then guide you through the process.

## **Updating data in database**

U can update existing data in database by typing the 'update' command. The application will then guide you through the process.

## **Deleting data from database**

U can add new data to database by typing the 'add' command. The application will then guide you through the process.

## **Reading data from database**

U can see the data in database by typing the 'read' command. The application will then guide you through the process.
